SUMMARY

Flutter Mobile Engineer with 2.5+ years of production experience and a Laravel backend mindset. I build and ship offline-first, multi-tenant business apps end to end: client requirements, Laravel API, Flutter app, CI/CD and App Store / Google Play release. Built the mobile department at Brain Solutions from zero and delivered 8 client apps. Founded VisionRise, a software startup whose first product, Appointly, is live in production.

SKILLS

Mobile: Flutter, Dart, Cubit/Bloc, GoRouter, GetIt, Dio, Clean Architecture, Firebase (Auth, FCM), Drift/SQLite offline storage and sync, barcode and RFID scanning, in-app purchases, Stripe, Flutter Web

Backend: Laravel, PHP, MySQL, Filament, Sanctum, OAuth, REST API design, multi-tenant and multi-role systems

Web and AI: React, TypeScript, OpenAI API

Delivery: Codemagic, GitHub Actions, App Store Connect, Google Play Console, Git, Docker, Linux deployment, Cloudflare, Sentry, Postman

Programming: Dart, PHP, JavaScript, TypeScript, SQL

EXPERIENCE

Founder | VisionRise — Sep 2026 – Present

- Founded a software company that builds ready-to-use SaaS for small businesses, with setup, team training and support included.
- **Built and launched Appointly** (appointlyapp.org), a multi-tenant appointment SaaS for clinics, live in production: Flutter staff app (web/PWA), React and TypeScript clinic website and patient portal, Laravel and Filament backend, OpenAI-powered booking assistant, English, Arabic and French with RTL.
- Run it on Docker and a VPS with CI deploys, Cloudflare, and nightly encrypted backups with a tested restore; about 560 backend, 300 Flutter and 37 React automated tests.
- **Built the VisionRise Portal** (Laravel 13, Filament 5), a multi-tenant management system with quotations, CRM pipeline, to-dos, reports and subscription billing, and the company website (React).

Flutter Mobile Engineer | Brain Solutions, Beirut (remote) — Apr 2024 – Present

- Built the mobile department from zero: legacy code cleanup, one skeleton app that unified the codebases (later multi-tenant), dependency upgrades, Codemagic CI/CD, App Store and Google Play releases, client servers and Firebase.
- Delivered 8 client apps and owned each client end to end except pricing: requirements, Laravel backend, Flutter app and store release (Dar Alrafidain: part of the app).
- **Brain WMS:** multi-tenant warehouse management app with Drift/SQLite offline sync on a Laravel and Filament backend, resold to multiple companies; live on Google Play.
- **Brain Gold:** RFID-first inventory for gold retail on Chainway and Zebra handhelds, with barcode fallback, live metal prices and offline sync.
- **Civissol:** inventory, equipment, fuel and purchasing app for site operations, with five user types and offline-aware sync.
- **Excellence Quality:** CRM for ISO certification companies with lead pipeline, approvals, auditor scheduling, client portal and dashboards; live on the App Store and Google Play.
- Designed a reusable Flutter starter skeleton (clean architecture, Cubit, GoRouter, auth, caching, theming, localization) that cut new-project setup time by about 60%.
- Trained a junior developer who then built and delivered his own app, now resold to a local customer.

IT Technician | Cosmaroma Inc, Toronto — May 2022 – Aug 2023

- Managed IT for a multi-branch retail company: Azure AD, Office 365, POS terminals and scanners, endpoints, printers, networking and user support.

IT Helpdesk | Vast, Beirut — Aug 2020 – Apr 2022

- Supported 200+ employees across 100+ Windows and Linux systems, led OS upgrades and managed the network and device lifecycle.

PROJECTS

- **DSR (in development, not released):** multi-tenant app for small shops covering sales, POS, stock, customers and dues. Flutter phone and tablet, Laravel 12, Filament; 900+ automated tests.
- **Retail POS (built, not launched):** multi-tenant point of sale on Flutter Web and Laravel with cash sessions, refunds, promotions, stock counts and PDF receipts.
- **Servio (in development):** service-provider directory with a Laravel 12 API (providers, media, ratings, favorites, radius search), a Filament admin panel and a Flutter app. github.com/Ali-Elchab/servio
- **Flutter Starter Skeleton (open source):** clean architecture, Cubit, GoRouter, auth and theming template. github.com/Ali-Elchab/flutter_skeleton

EDUCATION AND TRAINING

Bachelor in Computer Engineering | Lebanese International University, Lebanon — Oct 2018 – Jul 2021
Full-Stack Web Development Bootcamp | SE Factory (Laravel, JavaScript, Git, APIs) — Nov 2023 – Feb 2024
Flutter & Dart: The Complete Guide | Udemy — Jan 2024
Foundations of Computer Science | SE Factory (Python, data structures, algorithms) — Sep 2023

LANGUAGES

English (fluent), Arabic (native)
